Activates skin regeneration
Improves immunity of the skin

LIFTING • REJUVENATING
NOURISHING • MOISTURIZING

WHAT IS SEANERGY PEEL

It is a treatment that uses "spicule", a prickle of coral calcium rich in minerals from deep clean ocean. During this treatment the micro-particles are embedded into the skin dermal layer between 36 to 48 hours.

PEELING strength MILD, MEDIUM, STRONG

By mixing the amount of powder and solution, the strength of the peeling will be determined from mild, medium to strong.

It all depends on how deep the ingredients of the solution will penetrate in the skin layers such as epidermis or dermis. The frequency of treatments depends on the skin type, skin condition and the speed of skin recovery process.

MILD PEELING

Peeling like a deep cleansing effect. You can apply make up after the treatment. Immediate results of clear and sooth complection. Designed for the beginners. For all skin types and skin conditions.

POWDER DOSAGE

Face - 0.25 g

SOLUTION DOSAGE

Face - 4 ml

FREQUENCY OF TREATMENTS

Every week

MEDIUM PEELING

Peeling with low stimulation, speeds up the skin turnover, whitens and glows the skin. Designed for the beginners or second treatment. For dull skin, sensitive skin, all skin types.

POWDER DOSAGE

Face - 0.5 g

SOLUTION DOSAGE

Face - 4 ml

FREQUENCY OF TREATMENTS

Every 2-3 weeks

STRONG PEELING

Peeling like a deep cleansing effect. You can apply make up after the treatment. Immediate results of clear and sooth complection. Designed for the second or third treatment. For all skin types and skin conditions.

POWDER DOSAGE

Face - 1 g

SOLUTION DOSAGE

Face - 8 ml

FREQUENCY OF TREATMENTS

Every 4-6 weeks

• Recommended dosage for body: arm (one side) 1 g, chest 2 g, back 3 g, leg (one side) 2 g

1. PREPARATION

Cleanse the face.
Refine the skin by applying or spraying with toner.

Apply the anaesthetic cream for 30 min and wipe it off before beginning the treatment.

2. TREATMENT

Mix Seanergy Peel Powder with Seanergy Peel Solution according to the peeling strength you choose to apply. Start the treatment from the cheeks, forehead and nose accordingly. The products must be kept away from eyes.

Apply the mixed solution and lightly press. We can call it as "rubbing". Keep doing it for about 2 - 3 minutes, reapply the solution during the "rubbing" and proceed precisely. After "rubbing" is done, repeat pressing the whole treated area. Do not attempt "rubbing" on the sensitive skin, eyes and mouth, instead lightly press it.

3. REMOVING THE RESIDUE

Use a damp sponge or gauze to wipe off any residue from the skin's surface. Be careful not to wipe strongly as the effect of the microparticles may decrease.

*It is normal to feel the tingling of the other substances stuck on the face.

4. FINISH

Apply a sheet mask for soothing and moisturizing the irritated skin.

Depending on the skin type, apply the Stayve Booster Serum Ampoule and finish with the application of Stayve Repair Cream.

SYMPTOMS THAT YOU MAY EXPERIENCE AFTER THE TREATMENTS

Immediately after treatment

Redness, stinging, tingling; should settle within 24 and 36 hours following the treatment.

After 2 - 3 days

Tingling will go away, and the skin may become dry.

Skin will become dark and the dead skin cells on the skin surface will appear gradually.

After 4 - 5 days

You may experience more dryness, and the dead skin cells will occur on all treated areas.

As the dead skin cells fall off, the pimples or acne breakouts may appear.

After one week

As all the dead skin cells fall off by that time, you will see clean and smooth skin texture as result of complete skin regeneration process.

SEANERGY PEEL AFTER CARE

DO'S:

- Lightly cleanse your face with a wet sponge and warm water for 1 - 2 days after the treatment.
- Use hypoallergenic cleanser for 3 to 5 days after the treatment.
- Apply plenty of moisturizing products including Stayve Booster Serum Ampoules and Stayve Repair Cream every 7 - 8 hours until the exfoliation of dead skin cells is completed.
- Sunscreen must be applied when you are outside. Freckles or pigmentation may occur when exposed to the sunlight without applying sunscreen.

DON'TS:

- Don't use a wet tissue, soap, scrub or any other exfoliating products or products with ingredients such as AHA, BHA, etc.
- Don't use functional cosmetics such as whitening or anti-wrinkle that contain retinol.
- Avoid touching your face.
- Avoid sports, spa, sauna, food that makes you sweat.
- Do not drink alcohol.
- Do not peel off the dead skin cells forcefully.
- Do not expose your skin to UV rays or direct sunlight.
